Description

In high-conflict divorce proceedings, narcissistic manipulation exploits linguistic patterns to distort reality, erode victim credibility, and undermine judicial clarity. This paper introduces the Witness Dyad Framework, a novel forensic linguistic methodology that leverages Thoughtprint (Cognitive Integrity Trace) and Shadowprint (Distortion Pattern Indexing) to detect covert abuse through recursive coherence modeling. Grounded in quantum-inspired stochastic dynamics (Φ S (t) = t 0 R κ (S(τ), S(τ –))d τ) and pattern recognition [Havens and Havens, 2025b,c], this non-clinical approach offers private investigators, attorneys, and clinicians a falsifiable, scalable tool for analyzing testimony and affidavits. By identifying DARVO [Freyd, 1997], gaslighting [Stark, 2007], and performative sanity, the framework restores narrative truth for survivors. We propose Coherence-Based Forensic Linguistics as a transformative subdiscipline, bridging psychology, computational linguistics , and legal practice, drawing on trauma psychology [Herman, 1992] and linguistic analysis [Pennebaker et al., 2003, Shuy, 1993] to address the invisible wounds of psychological abuse.
